

Jordan Hotel Dataset Research Report

Executive summary

This report compiles a **curated 50-hotel Jordan dataset** spanning **Amman, Petra/Wadi Musa, the Dead Sea, Aqaba, Wadi Rum, Irbid, Madaba, Ajloun, and Zarqa**, using a source hierarchy that favors the **official Jordan Tourism Board hotel listings**, the **Jordan Convention Bureau venue finder**, and **official hotel contact/location pages**. The tourism-board listings were especially useful for hotel names, star class, phone numbers, emails, and official website references in Amman, Petra, the Dead Sea, Irbid, Madaba, and Zarqa, while the Jordan Convention Bureau venue pages were the most efficient official source for full postal addresses and contact normalization across Amman, Petra, Aqaba, and the Dead Sea. ¹

The strongest parts of the dataset are **official name, city/area, address, star rating, official website, phone, email, and short descriptive classification**. The hardest fields to verify without paid APIs or browser automation were **GPS coordinates** and **direct hotel image assets**, because many hotel sites expose maps and galleries through JavaScript or embedded widgets rather than static HTML. Where coordinates were available in machine-readable official pages, they were captured—for example on **Fairmont Amman, Mövenpick Resort Petra, and Mövenpick Hotel Amman**. ²

For image collection, the report also assembles a **high-quality 21-image pack** drawn from official or quasi-official sources, especially **Fairmont/Accor image assets**, Jordan Convention Bureau venue images, and official Mövenpick pages for Petra, Amman, Dead Sea, and Aqaba. These are appropriate starting assets for a Google Drive image library and can be downloaded without API keys. ³

The full CSV-ready tables accompany this report:

Research design and source strategy

The source hierarchy used here was conservative. First priority went to **official Jordan destination and hotel listings** from Visit Jordan and the Jordan Convention Bureau. Those pages explicitly list regional hotel inventories and, for many properties, provide canonical address/contact information that is easier to normalize than scattered OTA snippets. Amman, Petra, and the Dead Sea all have especially strong official listing coverage; Irbid, Madaba, and Zarqa are also represented through Visit Jordan hotel pages. ⁴

Second priority went to **official hotel contact and location pages**. These were essential where static HTML exposed richer detail than tourism-board pages. Fairmont Amman, for example, publishes full address, contact details, and GPS; Four Seasons Amman exposes a detailed contact page; official Accor/Mövenpick

pages for Petra and Amman expose address, amenities, and GPS in structured, indexable text; Hilton, Hyatt, and Radisson expose strong contact/location metadata in SEO-visible pages. ⁵

Third priority went to **major OTAs and industry hotel directories** only when official pages did not expose a field in crawlable text. That was particularly useful for some address confirmations, amenity confirmation, and smaller-city or camp properties. Examples include Travel Weekly, Booking.com, Trip.com, Agoda, TripAdvisor, Kayak, and Google Hotels snippets for properties such as Crowne Plaza Amman, Dead Sea Spa Hotel, Petra Moon Luxury Hotel, Saint John Hotel, and Jawabreh Hotel & Suites. ⁶

The table's **price band** is intentionally normalized to **low / mid / high**, not a claimed live average nightly rate. That is the most defensible format without date-specific scraping, because Jordan hotel pricing varies materially by season, day of week, room category, and package inclusions. The bands here are based on **star class, chain positioning, and visible public-rate examples or "rates from" snippets**, not a statistical mean. ⁷

To keep the dataset rigorous, **blank cells mean "not reliably exposed in source-friendly text"**, not "does not exist." That is especially relevant for GPS coordinates, direct image URLs, email addresses at some camps, and distinct booking-page URLs when the official site itself is also the booking surface. ⁸

Folder architecture and collection workflow

A clean Google Drive structure will matter more than almost any single metadata field once image volumes grow. A practical structure is:

```
Jordan_Hotels_Dataset/  
  metadata/  
    jordan_hotels_50.csv  
    jordan_extra_hotel_images.csv  
    source_notes.md  
    collection_log.md  
  hotels/  
    amman/  
      fairmont_amman/  
      four_seasons_hotel_amman/  
      amman_rotana/  
      ...  
    petra_wadi_musa/  
      movenpick_resort_petra/  
      petra_marriott_hotel/  
      ...  
    dead_sea/  
      kempinski_ishtar_dead_sea/  
      movenpick_resort_spa_dead_sea/  
      ...  
    aqaba/  
      al_manara_luxury_collection_aqaba/
```

```

kempinski_hotel_aqaba_red_sea/
...
wadi_rum/
  memories_aicha_luxury_camp/
  wadi_rum_bubble_luxotel/
  sun_city_camp/
irbid/
madaba/
ajloun/
zarqa/
extras/
  official_hotel_assets/
  tourism_board_assets/
  red_sea_beachfront/
  dead_sea_spa_pool/
  petra_gate_and_views/
  urban_ammman_luxury/
review/
  duplicates/
  low_resolution/
  unsure_rights_or_unclear_source/

```

A consistent filename pattern will make later deduplication much easier:

```
{region}__{hotel_slug}__{view_type}__{source_tag}__{seq}.jpg
```

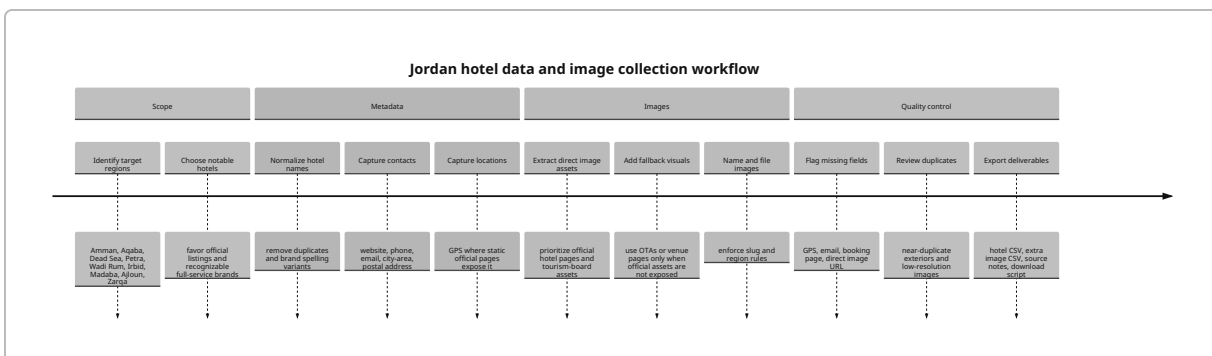

Examples:

```

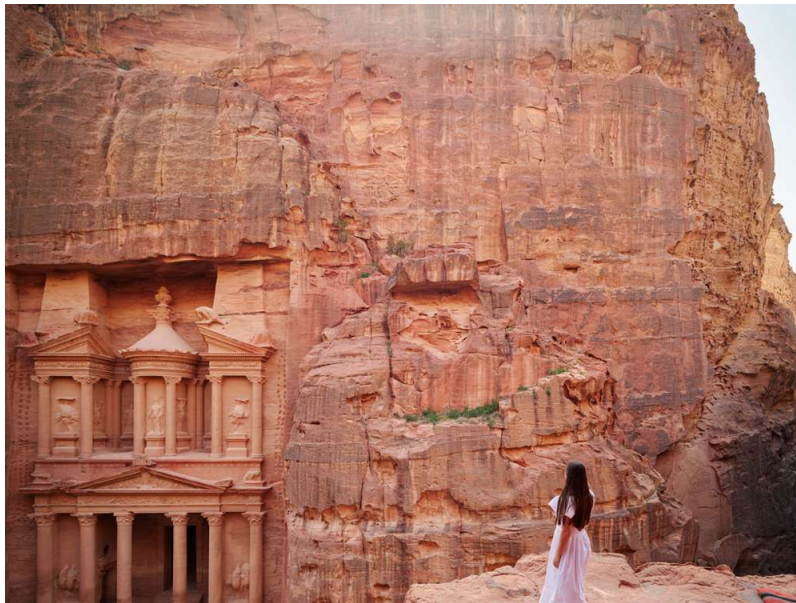

ammman_fairmont_ammman_meeting-room_jcb_001.jpg
petra_wadi_musa_movenpick_resort_petra_petra-view_official_001.jpg
dead_sea_movenpick_resort_spa_dead_sea_infinity-pool_official_001.jpg
aqaba_movenpick_resort_residences_aqaba_beach-sunset_official_001.jpg

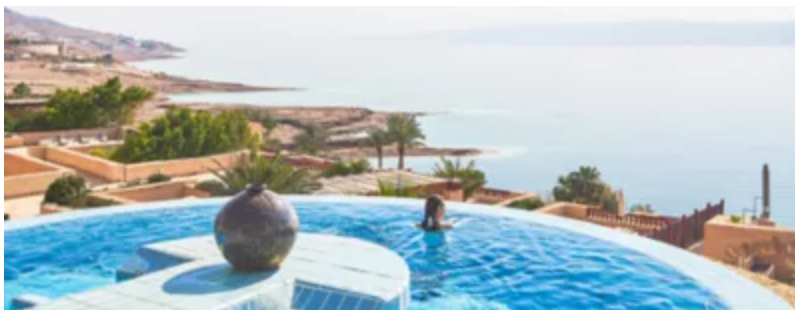

```

A sensible collection timeline is below.

A few representative preview assets collected from official or quasi-official sources are shown below. These illustrate the mix of urban luxury, Petra positioning, and Dead Sea resort imagery that works well for the extra image library. 9

Curated hotel dataset

The full normalized hotel table is attached in CSV form. It combines official tourism-board listings for hotel names and star categories, Jordan Convention Bureau venue pages for full addresses and contact normalization, official hotel location/contact pages where available, and OTA/industry supplements only where the primary source did not expose the field in crawlable form. ¹⁰

Representative preview

The rows below are only a **preview**. The full 50-row table is in the downloadable CSV.

Hotel	City or area	Star	Address	GPS	Price band	Image preview URL
Fairmont Amman	Amman / Abdoun, 5th Circle	5	6 Beirut Street, 5th Circle, Abdoun, PO Box 831370, Amman 11183, Jordan	31.95987,35.881184	high	https://businessevents.visitjordan.com/uploads/venues/images/177ec689-030c-4746-af90-4b5a65649c8f.jpg
Four Seasons Hotel Amman	Amman / Jabal Amman, 5th Circle	5	5th Circle, Al-Kindi Street, P.O. Box 950344, Jabal Amman, Amman 11195, Jordan		high	

Hotel	City or area	Star	Address	GPS	Price band	Image preview URL
Mövenpick Hotel Amman	Amman / Madina Monawarah	5	Madina Monawarah Street, AlJathimiya Street, PO Box 941835, Amman 11194, Jordan	31.986088,35.864116	mid	https://www.ahstatic.com/photos/b5j0_ho_00_p_1024x768.jpg
Mövenpick Resort Petra	Wadi Musa / Petra Gate	5	Tourism Street, P.O. Box 214, Petra 71810, Jordan	30.32568,35.469481	high	https://www.ahstatic.com/photos/b4p3_ho_02_p_1024x768.jpg
Petra Marriott Hotel	Wadi Musa	5	Queen Rania Al Abdallah Street, Wadi Musa, Jordan		high	
Mövenpick Resort & Spa Dead Sea	Sweimeh / Dead Sea Road	5	Dead Sea Road, Sweimeh, P.O. Box 815538, Amman 11180, Jordan		high	https://m.ahstatic.com/is/image/accorhotels/HCM_P_4325944
Kempinski Hotel Aqaba Red Sea	Aqaba / King Hussein Street	5	King Hussein Street, Aqaba 77110, Jordan		high	

Hotel	City or area	Star	Address	GPS	Price band	Image preview URL
Mövenpick Resort & Residences Aqaba	Aqaba / city center beachfront	5	King Hussein Street, Central Zone, Aqaba 77110, Jordan		high	https://m.ahstatic.com/is/image/accorhotels/HCM_P_8878798

Preview-row sourcing: Fairmont Amman official contact/GPS and JCB venue page; Four Seasons official and JCB venue page; Mövenpick Amman and Petra from official Accor pages; Dead Sea Mövenpick from official Mövenpick page; Petra Marriott and Aqaba/Dead Sea resort addresses from JCB, official brand pages, or OTA supplements where needed. ¹¹

Downloadable full CSV-ready table

[Download the full 50-hotel CSV-ready table](#)

That file includes these columns:

```
hotel
city_area
address
gps
star
website
booking_page
phone
email
description
amenities
price_band
image_url_1
source_basis
notes
```

The **notes** field explicitly flags cases where GPS was not reliably exposed, a direct hotel image URL could not be extracted from static HTML, or an email address was not clearly visible. This is the report's most important quality-control mechanism, because many Jordan hotel sites still require dynamic rendering for maps and galleries. Official sites that did expose image and location data in parser-friendly form were the exception rather than the rule. ¹²

Extra hotel image pack

The attached extra-image CSV contains **21 high-quality hotel-related image URLs** that are suitable for a starter image library. These come primarily from **official Accor/Mövenpick image assets** and the **Jordan Convention Bureau**, making them especially useful when you want cleaner provenance than generic web-image results. 3

Downloadable full extra-image table

[Download the 21-row extra image URL table](#)

A good operational rule is to treat these extra images as **shared editorial or promotional assets**, not as one-to-one hotel-cover photos. That keeps your per-hotel folders cleaner and helps you reuse the strongest visuals across decks, landing pages, or marketplace tests.

Download automation

The script below downloads both the hotel-specific image URLs found in the main CSV and the extra-image pack into the folder structure proposed earlier. It does not require API keys.

```
from __future__ import annotations

import csv
import os
import re
import time
from pathlib import Path

    #

```

```
# Copy the CSVs into BASE_DIR / metadata before running.
download_hotel_images()
download_extra_images()
```

A few implementation notes. The script deliberately slows requests slightly to avoid hammering servers. It also writes images into region and hotel folders automatically, labels hotel-cover images consistently, and puts the extra pack in a separate editorial-assets folder. If you later decide to enrich the image library more aggressively, the next practical step would be browser automation for JavaScript-heavy official galleries, because many hotel pages expose additional image assets only after dynamic rendering. That limitation is visible across several Jordan hotel sites in the sources reviewed here. ¹³
